PROFESSIONAL SUMMARY

Highly motivated Computer Engineering student at An-Najah National University with a strong academic record (GPA: 3.85) and expected graduation in 2026. Proven experience in backend development, and modern web technologies. Has a knowledge and some hands-on experience in distributed systems, cloud platforms (AWS/GCP), containerization (Docker, Kubernetes), and modern development lifecycles (CI/CD). Passionate about building impactful, user-focused solutions and continuously expanding technical and problem-solving skills.

EDUCATION

Secondary School **End Date: July/2021**
Qadri Tuqan Secondary Boys School, Nablus

- Passed with average 98.1

BA, Computer Engineering **Sep/2021-June/2026**
An-Najah National University, Nablus

- Expected to graduate next year.
- Current GPA: 3.85

EXPERIENCE

- **Backend Intern – Foothill Technology Solutions:**
  - Completed structured backend training focused on **Golang**, cloud platforms, and distributed systems.
  - Gained hands-on experience with **CI/CD workflows, SQL databases, Docker, Kubernetes, RabbitMQ (Pub/Sub), Git/GitHub, AWS, Google Cloud, and CDNs**.

SKILLS

- **Programming Languages**
  Golang, Java, C/C++, Dart (Flutter), JavaScript, PHP
- **Backend & Cloud**
  Node.js, SQL & NoSQL databases, Docker, Kubernetes, CI/CD, RabbitMQ, AWS, Google Cloud
- **Mobile & Web**
  HTML/CSS, JavaScript, PHP, Flutter/Dart Basics, React Basics
- **Software Engineering**
  Data Structures & Algorithms, Microservices, OOP, Problem Solving, Git/GitHub
- **Soft Skills**
  Teamwork, Communication, Working Under Pressure

LANGUAGES

- English – Good

PROJECTS

- **Qashan Ceramics And Artworks Web Application**:
  Developed a dynamic web application for an art-focused business to display and sell handmade ceramic products. Utilized **HTML/CSS**, **JavaScript**, and **PHP** for frontend/backend development and integrated database support for managing products, orders, and customer interactions: https://github.com/OmarJarbou/web_project
- **Event Planner Console Application**:
  Created a Java-based console application to manage event-planning tasks such as guest lists, schedules, and event logistics. Practiced object-oriented programming**,** data structures**,** and file handling: https://github.com/fadihamad40984/Event_Planner--Software-project--
- **HopeConnect – A Donation & Sponsorship Management Platform**:
  A backend API system for managing donations, orphan sponsorships, and support services for children in Gaza. Built using Node.js and MySQL, with features like payment processing, user roles (donor, sponsor, volunteer), and secure CRUD operations: https://github.com/OmarJarbou/advanceSoftwareProject
- **Bazar – A Backend Online Book Store (In Progress):**
  A distributed backend system for managing only books for now, and payments. Each module is implemented as a standalone microservice with separate storage and RESTful APIs. The architecture employs an API gateway, containerized services (Docker), communication between containers using HTTP requests and docker networks, and follows scalable design principle: https://github.com/OmarJarbou/DOS_Project
